

Dont Believe All Rags are Created Equal

Can you believe they are both 20 kilo's?

As seen in this picture nothing comes close to the ease of handling, and simplicity of distribution of these "Bricks". We have specifically designed and packaged our "Bricks" for all Service Industries. "Bricks" make things simple for the workers to have what they need, right at the worksite. "Bricks" have a physical dimension of 50cm wide 40cm tall and 20cm deep, which makes them an easy fit onboard any service cart or vehicle. 10kg is enough rags, for the biggest of jobs!

10kg was settled on for Occupational Health and Safety & Work Place Health and Safety guidelines. For both men and women, 10kg is below the upper limits set out in the guidelines, while still maintaining a more than sufficient rag count per "Brick".

Rags made Easy

Transportation of "Bricks" is simplified due to the "Bricks" ability to interlock onto a standard pallet allowing up to 900kg to be stacked while staying below any transport height and weight restrictions.

Another major advantage of our "Bricks" is lack of wastage. A traditional bag or bale of rags has to be ripped open allowing rags to spill out every where. "Bricks" however are opened by putting a small slit in the top side of the bag, and are then dispensed - piece by piece - just like a facial tissue box. This means no lost rags! Bricks are water and dust proof, and "simply" the smartest and most cost effective alternative for any application.

Warehousing is easy, with one pallet holding 90 "bricks". Problems such as split bags or over hang from loose bags and bales are a past memory. Inventory accuracy is a snap, with a simple glance you can count to the last kilo how much stock is being held at any one place.

"Bricks" are being packaged with 100% Stretch Knit material (T-Shirt) in both colored or 100% white. Stretch Knit is the most versatile cleaning wiper material as it has exceptional absorption capability. Stretch knit is soft enough for any polishing or detail work, and has a higher heat handling ability than fleecy or cotton materials."

Rule of thumb : " Our customers have found up to a 30% reduction in usage when switching from a cheap cotton rag to our stretch knit Wipers."

Rule of thumb 2: "Give staff 20kg of rags, they'll use 20kg." "Give them 10kg of rags they'll use only 10kg", a significant saving right there!

Heavy Industry - General Cleaning, Automotive & Detailing - Marine & Boat Building -Hospitality.
Ideal for confined industrial operations, such as mining and shipping.

COMPLETE RAG PACKAGING

"Our complete Cleaning Wiper Range"

10 ♦ 15 ♦ 20 KG
